Living with Aussie Wildlife

Learning to live with our wild friends will make you a life saver!

ACROSS

- 1 If you let us, we will roam and hunt birds, marsupials and small mammals, and the wildlife almost always loses!
- 4 The process by which wildlife are losing their natural homes
- 7 Great for hot summers, but not great if wildlife fall and can't get out. Ramps and covers go a long way to making sure I'm not a deathtrap for wildlife
- 8 Bin it, save wildlife from eating it and getting sick!
- 9 We live in loads of homes as part of the family, but have been known to attack koalas, so we need to be carefully contained in koala habitat

DOWN

- 2 With too much speed and not enough attention I will kill
- 3 We get caught in barbed wire, we hang upside-down, and if you find us injured you should call a professional and not touch me
- 5 When I am barbed bats get stuck in me and can suffer a lot
- 6 Dogs barking, loud music and people shouting around our wildlife friends can cause them to have too much of this
- 7 Ratbait is a form of this. Ratbait kills rats and also wildlife. Less harmful ways of controlling pests, like humane traps will go a long way in avoiding unwanted wildlife death
